ACCESSORIES

Please call us if you wish to purchase accessories, or if you have any questions about our accessories.

Battery Back-up Power

Battery back-up power units are available that will keep your Dog Guard® system up and running in the event of a temporary power outage in your neighborhood. Run time is approximately 4 1/2 hours.

Cat & Dog Collar

Collars come in cat, xsm, sm, med, lg, xlg and are available in red, hot pink, blue, black, green or purple. They feature quick release clasps

Cat & Dog Designer Collar

The Dog Guard® designer collar comes in yellow and blue stripes with a pocket that the receiver fits into.

Probe Caps

Probe caps are rubber caps that slide over the probes and prevent the pet from receiving a stimulus. They allow for training with an audible tone. These can be used during the initial training period, allowing the pet to learn the perimeter through the tone prior to initiating the stimulus.

Probes

Probes are nickel plated brass and come in various sizes and shapes allowing the Dog Guard[®] professional dealer to assemble the receiver with the probes best designed for your pet. This will assure that good contact is made.

Remote Strips

Remote Strips are designed for those hard to contain pets. They do not increase the stimulation that the pet receives; but spreads the stimulation out to the neck and ear area of the pet.

Shunts

Shunts are resistors that can be placed on the receiver posts to control the maximum level of stimulus for each of the DG receivers. Shunts enable your Dog Guard[®] professional dealer to customize the level of stimulus that is correct for your pet.
