RT-2 Room Transmitter

Features

Designed to contain or restrain pets in or from designated areas inside of your home, such as individual rooms, the garage or basement, the RT-2 room transmitter is a small versatile device that is portable and can travel with you and your pet.

The RT-2 room transmitter is a great way to keep pets off countertops, furniture, out of special rooms, or out of the garbage!

- The green **LIGHT** serves as a power light, wire break and surge indicator. If there is a wire break or power surge, it will flash and also sound an audible alarm.
- The RANGE CONTROL adjustment is recessed to prevent unwanted tampering. The field range can be easily adjusted by using a small screwdriver.
- When the RT-2 room transmitter is set in the encoded mode, an ID code makes the system immune to all interference from stray signals and provides dual zones, or signal fields. In the first signal field, the pet receives a warning level stimulus that has been preset on the front of the TR-2 Room Transmitter. Its purpose is to warn the pet to turn back. Should the pet enter the second signal field, the receiver will automatically increase to a stronger stimulus.
- The CORRECTION LEVEL ADJUSTMENT works only in the encoded mode. There are 32 levels of stimulation to choose from. This adjusts the amount of stimulation the pet will receive in the first signal field.
- The RT-2 room transmitter is available in two frequencies.
- The RT-2 room transmitter radiates a 360^a signal up to 8 feet.
- The AC Adapter has a 10-foot long cord, so it should accommodate most outlet configurations in the home.
- The RT-2 room transmitter has a LIFE TIME warranty.
